

Portable Test Unit

CECO Filters' Portable Test Unit can be shipped to your facility for convenient on-site evaluation of individual fiber bed filter elements.

Elements which have been removed from operation and washed can be tested off-line to determine the effectiveness of the wash procedure and any deviations from the design pressure drop and flow rate parameters.

The test unit can also be used for testing filter elements which have been repacked on-site to ensure they meet design requirements.

Conveniently test your fiber bed filter elements at your facility with CECO Filters' Portable Test Unit.
