#### **The Situation**

A major North American food production company required custom aspiration duct fabrication for a soy bean processing operation and approached A-Lert Construction, who in turn, called on KB Duct for the solution.

#### **The Challenge**

The aggressively scheduled project required heavy duct design, complex field measurements, precise fabrication, potential design modifications, and sequenced shipping with exceptional project management capabilities.

#### **The Solution**

While engaging with the customer, the team recognized the project required heavy industrial design and complex project management expertise. Therefore, the CECO Kirk & Blum team was integrated into the project for increased engineering insight.

#### **The CECO Advantage**

KB Duct solutions coupled with Kirk & Blum project management.

#### **The Operational Results**

CECO managed the customer's aggressive delivery timeframe. CECO shipped materials in a structured, well-thought manner which kept the customer's installation crew working without any down time.

#### **The Environmental Benefits**

After implementing this system, more final product was recovered during this necessary process leading to less waste for the company to deal with in the end.
