## Heavy Oil Scrubbing Systems for Rolling Mill VOC Control

**B**usch International is the leading supplier of Rolling Mill Fume Exhaust Systems in North America. We have over 200 successful installations worldwide. Busch International builds fume exhaust systems for new and existing mills. We offer a complete menu of oil mist and vapor control technologies to meet regulatory standards anywhere in the world. Our Heavy Oil Scrubbing Systems provide state-of-the-art VOC control and significant coolant reclamation and recovery for Aluminum Cold Mills and Foil Mills.

# BUSCH EMISSION CONTROL OPTIONS

**B**usch International, working with Sulzer Chemtech, installed the first Heavy Oil Scrubbing System on a U.S. Rolling Mill In 1993. We provided several additional systems prior to Sulzer withdrawing from the systems market. Recently, Busch International re-established our relationship with Sulzer, to offer an upgraded Heavy Oil Scrubbing System. The system utilizes advanced Sulzer internal packing and incorporates factory assembled distillation modules for compact, cost effective installations. Every system is backed by Sulzer's process simulation for best available control efficiency.

**B**usch International  
H.O.S. System features:

- ▶ Modular Distillation Module for easy installation
- ▶ North American manufacture
- ▶ 3-stage vacuum system with VFD control
- ▶ Sulzer process simulation performed for each unit size
- ▶ P.P.S. pre-filtration option
- ▶ Complete system design
