

Field Service | Installation Supervision

## Internals Installation Supervision

### Replacement of Vessel Internals

CECO Peerless offers a wide range of vessel internals for separation, filtration, oily-water, and produced water treatment. Our technological components are applied both to new-build vessels and as replacements for existing housing.

Our internal components can be identical replacements of damaged or old internals or upgrade / retrofit parts fitting into a non-CECO housing.

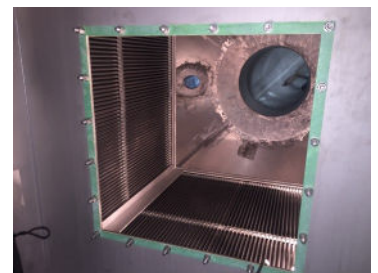

Our highly experienced personnel have decades of experience assisting clients on-site (on-shore/off-shore).

Supervision activities include:

- disassembly of the existing components
- making appropriate modifications to welded/fixed supports
- installation of new CECO-supplied parts.

### CECO Advantage

- Highly professional and experienced Field Supervisors
- Certified for offshore (BOSIET / HUET)
- Confined Space Permits
- Immediate recommendations for suitable modifications to fixed supports
- Rapid mobilization from various global locations

### Changeout Supervision

CECO supervisors can also assist with filter element changeouts during regularly-scheduled preventative maintenance programs.

We can assess the condition of spent elements and provide consultation in troubleshooting cases.
